TASKS DETAILS

EASY

1. OddOccurrencesInArray
Find value that occurs in odd number of elements.

Task Score	Correctness	Performance
100%	100%	100%

Task description

A non-empty array A consisting of N integers is given. The array contains an odd number of elements, and each element of the array can be paired with another element that has the same value, except for one element that is left unpaired.

For example, in array A such that:

```
A[0] = 9  A[1] = 3  A[2] = 9
A[3] = 3  A[4] = 9  A[5] = 7
A[6] = 9
```

- the elements at indexes 0 and 2 have value 9,
- the elements at indexes 1 and 3 have value 3,
- the elements at indexes 4 and 6 have value 9,
- the element at index 5 has value 7 and is unpaired.

Write a function:

```
int solution(vector<int> &A);
```

that, given an array A consisting of N integers fulfilling the above conditions, returns the value of the unpaired element.

For example, given array A such that:

Solution

Programming language used:	C++
Total time used:	6 minutes
Effective time used:	6 minutes
Notes:	*not defined yet*

Task timeline

14:45:40 14:51:29

Code: 14:51:28 UTC, cpp, final, score: **100**

show code in pop-up

```
1  // you can use includes, for example:
2  // #include <algorithm>
```

```
A[0] = 9  A[1] = 3  A[2] = 9
A[3] = 3  A[4] = 9  A[5] = 7
A[6] = 9
```

the function should return 7, as explained in the example above.

Assume that:

- N is an odd integer within the range [1..1,000,000];
- each element of array A is an integer within the range [1..1,000,000,000];
- all but one of the values in A occur an even number of times.

Complexity:

- expected worst-case time complexity is O(N);
- expected worst-case space complexity is O(1) (not counting the storage required for input arguments).

```
3
4  // you can write to stdout for debugging purposes
5  // cout << "this is a debug message" << endl;
6
7  int solution(vector<int> &A) {
8      // write your code in C++14 (g++ 6.2.0)
9      long odd = 0;
10     for (int i = 0; i < A.size(); i++) {
11         odd ^= (long)A[i];
12     }
13     return odd;
14 }
```

Analysis summary

The solution obtained perfect score.

Analysis

Detected time complexity: O(N) or O(N*log(N))
